

Private Diagnostic Clinic, PLLC

December 9, 2016

Mr. Earle Wanzer  
Executive Vice President  
Business Development  
Mill Chem Manufacturing Inc.  
650 Bassett Drive  
Thomasville, NC 27360

Dear Mr. Wanzer,

I have had the pleasure of presenting your Golden Environmental Odor Eliminator product to various nurse leaders within key clinical service units at Duke University Health System. As you are aware, in collaboration with the Duke Product and Resource Equipment Team (PERT), a pilot period was launched between May and September, 2016. The following patient care settings were identified as pilot locations for the product based on the prevalence of various sources of malodor: Emergency Department, Wound Care Clinic, Dialysis Unit – Inpatient, and Dialysis Clinic – Outpatient.

The primary sources of malodor in these settings included emesis (vomit), urine, feces, and wound exudate. I am excited to report that the feedback received was overwhelmingly positive. The Odor Eliminator product proved to be extremely effective in eliminating foul odors in the above referenced health settings. I am now convinced more than ever that the proprietary blend of microorganisms, enzymes, and surfactants used in the formulation that you espoused performed as promised.

Consistent with the overall Duke Health commitment to create a sustainable environment for high quality patient care, trial participants were pleased with the quick action of the product, usability, including ease of use, and the fact that the product was made from pure, renewable, plant extract ingredients that did not contain dyes, ammonia, or chlorine.

While this letter does not warrant or imply the guarantee of long term commitment or purchase, as an experienced nursing professional with many years of diverse clinical experience and expertise, I am very comfortable in expressing confidence in the Odor Eliminator performance introduced by Golden Environmental. The product is effective for the recommended purpose and I would strongly recommend the Mill Chem product to other professionals in health facilities to eliminate malodorous smells.

Please contact me if I can provide more information.

With much sincerity,

  
Cheryl Brewer, PhD, MSN, RN
