

GOLDEN ENVIRO OIL ABSORBENT

Instructions

Place Absorbent around the spill and push through the spill until all material is completely absorbed.

If light film remains, simply take a handful, place it in the area and rub like sandpaper and the remainder of the spill will disappear.

When cleaning up flammables, if product is over saturated a vapor and fumes will be above the spill, this happens with all instant absorbents.

Always remove any spill from any location of spark or possible ignition point.

The best solution is just clean up material and place in any flammable container or push material away from the potential Ignition point.

All instant absorbents should be done in this manner, being and including pads and rags.
